

**FINAL REPORT:** CFPhysio.com is an educational website currently providing education on evidence-based physiotherapy management in Cystic Fibrosis (CF) for both health professionals and individuals/carers impacted by CF. The Abbie Fennessy Memorial Fellowship has allowed the team at CFPhysio.com to further develop instructional videos on a variety of inhalation therapy and airway clearance techniques. These videos are now available on the website [www.cfphysio.com](http://www.cfphysio.com). Videos include instructional demonstrations of various airway clearance devices/techniques, delivery of inhaled medications, and there are also home-based videos demonstrating real-world home physiotherapy sessions for infants/toddlers. Some of the videos were initially designed for healthcare professionals and the grant also allowed CFPhysio.com to upload these and additional resources to a section of the website accessible to individuals with CF, parents and caregivers. The videos are not to replace usual care, rather intended to enhance the care delivered by CF specialist clinics and provide an additional supporting resource for the CF community. Feedback through focus groups with the CF community and clinicians has provided valuable positive assessment of these resources. With more clinic reviews moving to telehealth and commencing new treatments via virtual health platforms the videos on CFPhysio.com have been helpful for all to enhance these changes in healthcare delivery. More paediatric focused videos were planned for completion however COVID has created issues with the production of these. They are continuing to be developed and will be uploaded to [www.cfphysio.com](http://www.cfphysio.com) once completed.

The grant has been acknowledged on the home page of the website in recognition of Abbie Fennessy.
